

RP ClinicFlow

Practice management and booking software made by a doctor for doctors

Scan for website

RP ClinicFlow connects patient booking, reception queue, doctor consultation, digital prescription, receipt billing, payment tracking, patient communication, medicine inventory, revenue reports, and backups in one clinic-ready system.

What It Handles

- QR booking from poster, website, Google profile, or WhatsApp link
- Walk-in registration with OPD code, token, duplicate warning, and search
- Doctor dashboard with waiting list, diagnosis, prescription, signature, and amendments
- Receipts with consultation, medicine cost, total bill, payment mode, discounts, and refunds
- WhatsApp/email links, retry queue, daily revenue summary, and follow-up reminders
- Medicine inventory, clinic sales, report uploads, audit logs, and backup status

Why Clinics Choose It

- Built from real clinic use, not only appointment scheduling
- Owner controls doctors, fees, services, roles, policies, templates, and integrations
- Staff can manage reception while sensitive settings remain owner-controlled
- Each buyer clinic can run in its own Firebase project with separate users and data
- Suitable for single-doctor clinics, specialty practices, multispecialty clinics, and hospitals

Introductory Launch Pricing

Live remote demo first. Then a 10-day full workflow trial after credit card or payment mandate setup. Billing starts after day 10 according to the selected category unless cancelled before trial end.

Single Speciality Clinic	Rs 25,000 setup Rs 5,000/month maintenance	One specialty clinic with focused OPD workflow.
Multispeciality Clinic	Rs 40,000 setup Rs 10,000/month maintenance	Multiple specialties, doctors, fee schedules, and role workflows.
Hospital	Rs 70,000 setup Rs 20,000/month maintenance	Larger OPD/hospital workflows with higher user and department needs.

Recommended deployment: each buyer clinic should be installed separately with its own Firebase project, domain, users, database, storage, backups, payment settings, messaging/API credentials, and owner-controlled access. Third-party charges such as cloud, domain, WhatsApp API, email/SMS, and payment gateway costs are billed separately.
